PROFILE

First-year graduate student in City Planning specializing in transportation policy and planning, with three years of experience applying GIS, spatial statistics, travel-time modeling, and quantitative research methods to questions of accessibility and equity. Interested in active transportation, public transit access, and data-driven planning.

EDUCATION

University of California, Berkeley, College of Environmental Design Expected May 2028

Master of City Planning. Concentration: Transportation Policy and Planning

Tufts University, Medford, MA, School of Arts and Sciences

Bachelor of Arts in Community Health and Spanish Literature, Summa Cum Laude August 2019- May 2023

PROFESSIONAL EXPERIENCE

Tufts University School of Medicine, Boston, MA

Assistant Researcher & Spatial Analyst (full time)

May 2023- June 2026

Spatial and Quantitative Analysis

- Modeled travel times and evaluated spatial inequities in public transit access to treatment facilities using R (R5R) and spatial-statistical regression models, evaluating how transit access varies across communities
- Applied advanced GIS methods in ArcGIS Pro, including hotspot analysis, geographically weighted regression, and location-allocation modeling to inform policy and resource allocation
- Cleaned, managed, and analyzed large geospatial datasets using Python, R, and STATA
- Designed and produced high-quality maps (choropleth, network-based accessibility, and heat maps) to communicate spatial patterns and provide data-driven support for policy decisions
- Assisted in developing a tiered statistical framework to generate county-level substance use vulnerability scores for the state of Idaho, integrating multiple datasets to identify areas for targeted investment and services
- Organized and managed large databases and documentation to facilitate data use across a team of analysts

Communication and Community Engagement

- Translated quantitative findings into written reports, peer-reviewed manuscripts, posters, and presentations
- Coordinated a community advisory board process involving stakeholders to facilitate community engagement
- Conducted street outreach, surveys, and in-depth interviews to collect data regarding substance use and violence

Teaching Assistant (Introduction to GIS for Public Health)

Spring 2025; Fall 2025

- Delivered guest lectures and live ArcGIS Pro demonstrations on attribute queries, spatial queries, and bivariate choropleth mapping, incorporating interactive components to reinforce learning
- Provided detailed, constructive feedback on assignments to improve cartographic design and analytical skills
- 100% of students rated instructional support as "excellent" or "very good"

EXTRACURRICULARS

University of California, Berkeley - **Transportation Graduate Students Organizing Committee**

Social Media and Communications Officer

Sep. 2026- present

- Manage communication channels for distributing information about alumni networking events and job opportunities to graduate students in transportation-related degree programs
- Organize materials for posting on social media, promoting professional and social events for members

SKILLS

GIS, Coding Languages, and Data Collection: ArcGIS Pro, Python, R, STATA, SQL, REDCap, Qualtrics

Microsoft: Word, Excel, and Powerpoint

Languages: Spanish (Professionally proficient)

Coursework: Active Transportation; Introduction to GIS; Advanced GIS; Introduction to Statistics; Spatial Statistics; Computer Science for All; Applied Quantitative Research Methods; Planning for Low-Impact Development
